

NQuire Limited - Specialists in Network Look-up Technology

Product Applications

NQuire provides a generic mobile number look-up facility as a family of products designed to meet the differing needs of a wide user market. Applications covered by the products include networked real time interrogation and historic cross network call confirmation for billing reconciliation and database reference purposes.

NQuire Confirm

NQuire recognises that there is a significant requirement for an historic tool for checking and reconciling received billing data against existing tariff information. NQuire Confirm has been developed for those customers who do not have the need, or the network service infrastructures to obtain the mobile number information on a real-time investigative basis, but nevertheless, require the benefits of the solution for cross network call confirmation, billing reconciliation and database referencing. NQuire Confirm is a prepaid, fully integrated and secure web based product, accessed using standard web browsers. It provides the user with a simple tool for uploading and downloading mobile telephone number information for analysis, independent of any special types of infrastructure or connectivity methods.

In its most basic iteration, NQuire support staff can accept the customer request for mobile number checking in the form of an email, with a simple text file or CSV attachment containing the list of the mobile numbers that require processing.

For more advanced applications, and where customers have set up an on-line account with NQuire, they can upload files directly onto the NQuire Mobile Number Look-up servers using the Web Based processing tool available at confirm.nquire.co.uk. Once uploaded, the service will automatically process the numbers and return them to the user account with up to date and accurate network information for all numbers processed and in the time scale specified by the customer. Customers can opt to have the numbers returned in "Real Time" (maximum of 25 numbers per upload) or in background mode where the number is unlimited. If background mode is chosen, the customer will receive an email when the numbers are ready for collection from their account.

NQuire Confirm is suitable for any type of organisation large or small that has a requirement to check the accuracy of billing data related to the fixed to mobile portion of their telecommunications bill. It is particularly beneficial to billing and bill reconciliation companies, network cost reduction organisations and tariffing companies who analyse and check client's bills for accuracy and call traffic patterns.

With an NQuire Confirm account, organisations have a readily available, accurate, easy to use and cost effective means of analysing ALL fixed line to mobile telephone calls including those calls to mobiles that have been ported to another mobile network. The ease of use of the application and its immediate availability via standard web browsers makes it an ideal tool for analysts.

For further information on setting up an NQuire Confirm account, please email your contact details to info@nquire.co.uk where one of our sales team will deal with your request.
